### Direct v. iterative solvers comparison SCtrain KNOWLEDGE PARTNERSHIP

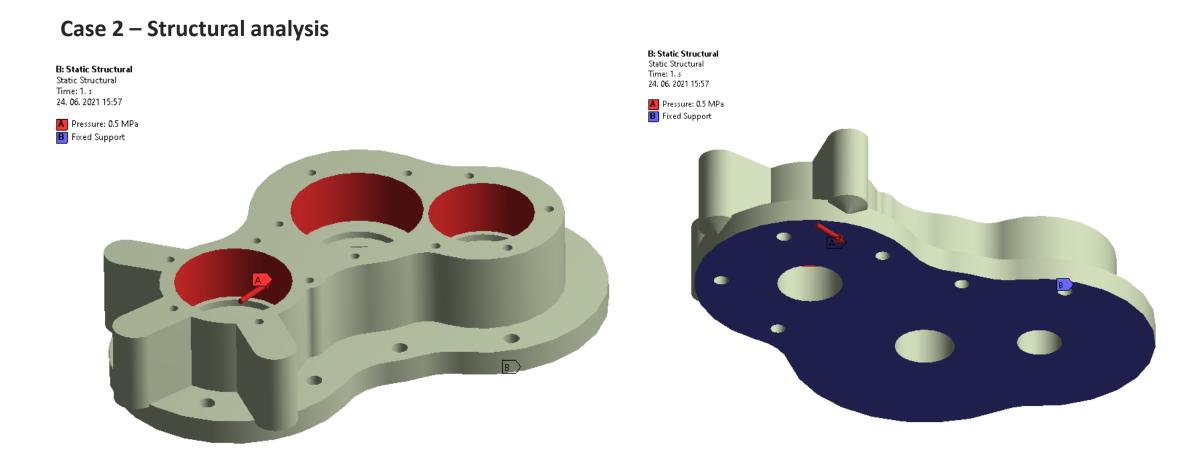

- Available solvers in ANSYS:
  - Sparse (Direct solver)
  - Preconditioned Conjugate Gradient PCG(Iterative)
  - Jacobi Conjugate Gradient JCG (Iterative)
  - Incomplete Cholesky Conjugate Gradient ICCG (Iterative)
  - Quasi-Minimal Residual QMR (Iterative)
- The selection of a solver can affect the speed and accuracy of a solution
- Solver needs to be specified at first load step
- In iterative solvers the tolerance can be modified at various time steps
- For distributed memory computations only SPARSE and PCG (and partly JCG) solvers are available in ANSYS
- Refer to ANSYS Help for further info (EQSLV.mhtml and Selecting a Solver.mhtml)

### Direct v. iterative solvers comparison SCtrain KNOWLEDGE PARTNERSHIP

#### Individual work case

- Apply BCs and loads as shown
- One bearing seat (yellow) fully fixed, the other free in the y-direction
  - Use Remote Displacement constraint with Deformable behaviour
- Compare results using direct, PCG, JCG and ICCG solvers with 4 CPU cores
  - Perform computation via terminal using input file
- Compute with 1, 2, 4, 8 and 16 cores and draw a problem scalability graph

#### Thank you for your attention!
